who will win

# *Ghost Elementary*

*By Jesse*

*Long ago there was a school called Shelledy Elementary. No one knew that they had a ghost school called Ghost Elementary.*

*On one Halloween a little girl named Lainie was going to a Halloween party at her school. She ran into the cafeteria and she saw her principal talking to a man. She noticed a big hole in the wall.*

*She saw her friend Halsey sitting in the cafeteria. Lainie saw a clear figure flying across the room. She told Halsey about it. Halsey saw the same clear figure that looked like Lainie but weirder. The figure looked mean, but Lainie was so nice. Lainie told Halsey that was a figure that looked like her. Halsey and Lainie went to the library and check out a book about the school.*

*It said that a man named Joe used to be a principal but died. He got old. It also said Mr. Joe used to work at Rim Rock but came to Shelledy. Mr. Joe gave extra homework.*

*He had a wife named Helga who was the vice principal. Helga messed up the clocks.*

*One day Jesse was in the cafeteria with everyone watching a movie. Helga changed the movie to "Lamas in Pajamas". After the movie, Mr. Joe stole food and threw kids back and forth.*

*Then the lights turned off and the kids started flying around and everyone and everything was silent.*

*Then everyone saw ghosts flying and they glowed. All 560 students were flying around the room. The ghosts put the students down and the kids went home.*

*The next day the kids went to an assembly and the microphone wouldn't turn on. Lainie and Hasey noticed that everyone had a ghost flying over them. There were still nine holes in a wall. Every kid went to an assembly and the ghosts were whispering and being loud.*

*The students went to the library because it was time for specials. Jesse started flying around the library. The students were reading scary stories in the dark. After some time, the flashlights they were using burnt out and the lights turned on and all the students saw the ghosts. Jesse called the Ghost Hunter on the phone and they came the next day.*

*Then Hunters ran to the café and well the giant Bobcat, which was a painting, jumped out of the wall.*

*The hunters threw axes at the bobcat and it wouldn't die. The daily Watch Dog ran to the office and called GHI (Ghost Hunters International). GHI wiped out most of the ghosts and the school was back to normal. But there were still ghost creeping up on people. That was a scary day. Then Jesse wake up mom called I told her about my dream she said wow what a dream. Then I got ready for school and everything that happened in my dream was real but. . .*

## Chapter Two

### Zombies Everywhere

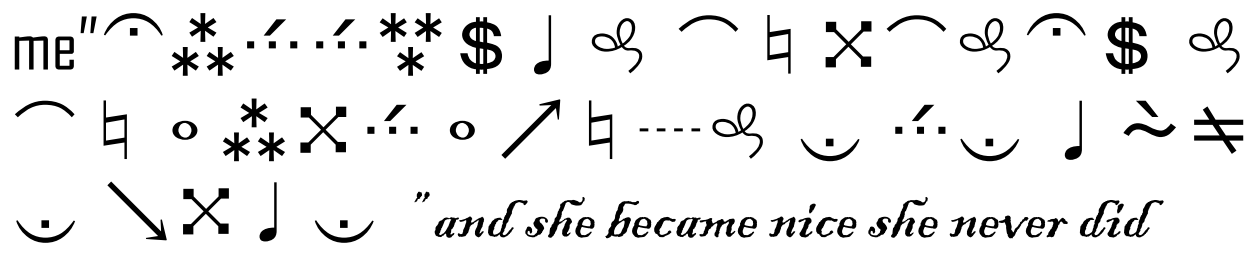

There were zombies on the way to school the next morning. I called GFI again.

But this time for real I screamed, "Help me please zombies!"

My teacher was a zombie. I never thought I would face the zombie town. I ran into the COOP and grabbed a soda. I yelled, "get back or else". I thought that would stop them, but one of them grabbed me and dragged me up the monument. I screamed.

It dropped me off a cliff  
"oooooooooooooooooooooooooooooooooooooooooooooooooooooooooooo!" I screamed  
as I am falling. Then I grew wings and flew up up up  
and I said, "see ya zombie!"

*Then from out of nowhere, an evil witch named Faith came riding on a broom, She cackled, "Not so fast" as she grabbed me.*

*I put a spell on her before she could put a spell on me"*  *" and she became nice she never did anything bad again.*

*Meanwhile, the school field was filled with goo, and wahboom it had all ghost, zombies, and skeletons. I still had that soda from earlier and took a big gulp.*

*Something in it turned me into a giant. I was a giant! I stepped on the skeletons. Then boom, boom, boom! I saw a giant zombie.*

*Then I woke up.*

*My teacher asked, "How do you solve this problem*

*Lesse °FV ≡*

$$e^{-i\omega t} \frac{\pi}{2} \oint \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \sqrt{a^2 + b^2} \iiint$$

" and he said, "quantums"

The bell rang and that was just the beginning. Then Albert Einstein came in and answered "amax +

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} e^{-i\omega t} n_Y \phi \quad e^{-i\omega t} [ [r \quad -$$

$$t09569 U \quad + 444\% + \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} +$$

+ =

333,9987,0000,967876,00,100000000,2

"

....

## Chapter Three

### The World

### Is

### Ending

One week later, I was watching the news on the TV at school. The news said the world is ending because alien space ships had landed all around the world. One flew over my house when.....
